EXECUTIVE SUMMARY

This report is based upon the speed data collected for the THIRD quarter (July 1st through September 30th) of calendar year 2002. The change from reporting in Federal Fiscal Year to Calendar Year is due to public response for this report to be reported by calendar year. This change took place with the Federal Highway Administrations (FHWA) approval.

As a whole the speed trends within the state are remaining relatively consistent, although, the majority of drivers are NOT obeying the posted speed limits. The exceptions to this were recorded at Permanent Traffic Recorders (PTR) on highways with a posted speed of 65mph, at these PTR sites the numbers are well below the numbers for 60 and 70 mph highways. The highways with a posted speed of 60 MPH & 70 MPH, Average speed trends throughout the state are at or slightly above the posted speed limits with the 85th percentile averaging 6-8 MPH above the posted speed limit. (Please see charts “Detailed Summary”).

There were several sites that show vehicles traveling in excess of 100 miles per hour, which was from 1 vehicle to as many as 53 vehicles in the three-day sampling. Of the top sites in the 100+ mph club, seven (7) were rural sites and seven (7) were urban. (There was a tie for 6th, 7th, 8th and 10th places). Permanent Traffic Recorder site FED#60 PTR# S826, Preston, milepost 23.54 on I-90 had 53 vehicles observed within the 72 hours collected in excess of 100 miles-per-hour, which put this site at the top of the 100+MPH Club for this quarter. In previous quarters of this year this site ranked 1st for the First Quarter and 2nd for the Second Quarter (See Top Ten List chart)

A safety concern that this report brings out is the ever-increasing volume of vehicles exceeding posted speed limits, based on this sample anywhere from 61-70% of vehicles observed on 60 & 70 MPH highways are exceeding the posted speed. The highways with a posted speed of 65 MPH have doubled from 15% to 31% of the vehicles observed exceeding posted speeds in the last three years.

The graphs above are representative of data collected for and reported in current and past Speed Reports.

DETAILED SUMMARY

The Top Ten List now has two groups within two of the four categories (Average Speed and 85th Percentile), one group is for highways with posted speeds of 60 mph and the other is for highways with a posted speed of 70 mph (These are the highways with the greatest volume of vehicles.)

AVERAGE SPEED:

Posted 60 MPH group:

Permanent traffic recorder site FED#5 PTR# R060 (Lacey), milepost 111.01 on I-5, is at the top of three of the four categories in the Top Ten List. The average speed recorded at this site was 64.28 mph (4.28 mph over the posted speed), the 85th percentile was 69.76 mph (9.76 mph over) and 84.8% of the vehicles observed were exceeding the posted speed limit, which was the greatest number of Vehicles exceeding posted speed for this quarter. In previous quarters this site did not rank high enough to be in the “Average Speed ” or the “85th Percentile” categories. (See Top Ten List chart)

Posted 70 MPH group:

Permanent traffic recorder site FED #75 PTR #R014 (Tyler/Fishtrap), milepost 254.23 on I-90, is at the top of two of the four categories for this group within the Top Ten List. The average speed recorded at this site was 71.84 (1.84 mph over the posted speed), the 85th percentile was at 78.3 mph (8.3 mph over) with 80.2% of the vehicles observed exceeding the posted speed limit. This site was reported in the previous quarter the average speed was 70.33 mph, the 85th percentile was at 78.3 mph. and this site did not qualify for the “Over Posted Speed” group. (See Top Ten List)

85th PERCENTILE:

Posted 60 MPH group:

As mentioned above, the top site for this group is FED # 5 PTR #R060 (Lacey). This site did not qualify to be included in the “85th Percentile” group for the previous quarters this year.

Posted 70 MPH group:

As mentioned above, the top site for this group is FED #75 PTR #R014 (Tyler / Fishtrap). This site has been continually increasing from the First Quarter (74.65 mph); Second Quarter (76.9 mph); through the present quarter (78.3 mph). (See Top Ten List)

DETAILED SUMMARY CON'T

In comparing the third quarters from Calendar years 2000 and 2001 to this quarter of 2002. The average speeds have steadily increased to at or slightly over the posted speed limit. The 85th percentile has stayed above the posted speed limit during all compared quarters and appears to be showing a trend of a constant increase in speeds during the three years compared. (See chart NEXT PAGE)

On interstate highways with the posted speed of 60 mph, the amount of vehicles observed over the posted speed limit, have remained relatively at 61% to 65% of the total vehicles observed. Yet, on highways with a posted speed of 65 or 70 mph, the volume of vehicles exceeding the posted speed limit, have increased dramatically. On 65 mph highways, over speeds have doubled from 15% to 31% of the total vehicles observed and on 70 mph non-interstate highways, the volume of over speeds have increased from 35% to greater than 70.4% exceeding the posted speed. (See below)

*The notable difference in volume of traffic observed during the three-day sampling on highways with a posted speed of 65 MPH between the third quarters of 2000 & 2001 to the third quarter of 2002 is due to some of the sites on these highways are no longer included within this report and or the posted speed at these locations were increased to 70 MPH. (See chart above)

DETAILED SUMMARY CON'T

Comparing the first three quarters of 2002, the volume of vehicles observed exceeding posted speeds have decreased on all highways by approximately 2% to 8% compared to the Second Quarter, and is only slightly above the First Quarter. This may be a seasonal factor.

The average speed recorded for this quarter on 65 MPH highways is still below the posted speed limits. Yet, the average speed on 60 & 70 MPH highways is at or slightly above posted speeds. The 85th percentiles for this quarter are above the posted speed on all highways and seem to be steadily increasing. On all highways, the 85th percentile has risen by 2+MPH, with exception to the 60 MPH Interstates where speed increased from the first quarter to present by slightly over 1 mile-per-hour. (See chart next) The fluctuation in average speed, 85th percentile between quarters seems to be a normal traffic pattern due to the weather conditions of each quarter—winter, spring, and summer. (See chart)

The highways with a posted speed of 65 MPH have doubled from 15% to 31% of the vehicles observed exceeding posted speeds in the last three years.

Speed Report Background

The Annual and Quarterly Speed Monitoring Program is administered by the Transportation Data Office of the Washington State Department of Transportation (WSDOT), in co-operation with the U. S. Department of Transportation (USDOT), Federal Highway Administration (FHWA).

Prior to the enactment of the Federally mandated National Maximum Speed Limit (NMSL), the purpose of the Speed Monitoring program was to provide reliable speed data for the purpose of evaluating speed trends to assist in highway design within the state. After the NMSL was instituted in 1974, states were required to have speed monitoring programs that determined if the motorists within the state were in compliance with the 55 mile per hour speed limits set by the NMSL.

In November 1995, the “National Highway Designation Act”, was enacted which resulted in the repeal of the NMSL. At that time, Washington State was no longer required to produce certification of speed limit enforcement. Even so, the program continued under the same format for several years.

Now the Annual/Quarterly Speed Monitoring Program is primarily intended to provide reliable data to be included in an annual report to be used in highway design, speed trend analyses, and collision analysis (as it relates to speeds).

Currently, there are 49 sites being monitored on Washington State highways with posted speeds of 60 miles per hour or greater. Monitoring is conducted on a quarterly and annual basis, the Annual Federal calendar is comprised from October 1st through September 30th; each quarter of the calendar year is represented in intervals of three months. The data is collected in 72 continuous hours (3 days) of mid-week sampling sessions per quarter in order to measure seasonal variations. The data is collected in five mile per hour increments. Annual and quarterly speed data is collected with permanent traffic recorders, (Diamond Traffic Products—Phoenix Traffic Counters and International Roadway Dynamics—1060 Weigh-In-Motion Collectors). In the report, Diamond units are referred to as Permanent Traffic Recorders (PTR) sites and IRD sites are referred to as Weigh-In-Motion (WIM). A description and location of each site is included within the following pages.
